Objectives

Problem Statement

Doctors: Spend lot of time on diagnosis, leaving less time for treatment/patient care

Patients: Have to schedule doctor visit (and spend money) just to get assessment of illness severity before treatment

Existing Solutions

Wheeze

A high-pitched whistling sound made while breathing.

Self-treatment

Seeking medical care

HEALTH CONDITIONS RELATED TO THIS SEARCH

Chronic obstructive pulmonary disease

A group of lung diseases that block airflow and make it difficult to breathe.

Symptoms may include

- Wheeze
- Shortness of breath
- Fatigue

Upper respiratory infection

A common viral infection that affects the nose, throat, and airways.

Symptoms may include

- Wheeze
- Cough
- Sneeze

Consult a doctor for medical advice

Feedback

Literature Review Summary

- BioBERT
 - Trained on biomedical corpus such as PubMed and PMC articles
 - Tasks: named entity recognition, relation extraction, and question answering
- Med-BERT
 - Trained on electronic health records
 - Tasks: disease prediction
 - The prediction of heart failure among patients with diabetes
 - The prediction of onset of pancreatic cancer
- CORe
 - Trained on patient discharge records as well as biomedical articles (PMC, Wikipedia, etc)
 - Tasks: diagnosis prediction, procedure prediction, in-hospital mortality prediction, and length of stay prediction

02

Methodology

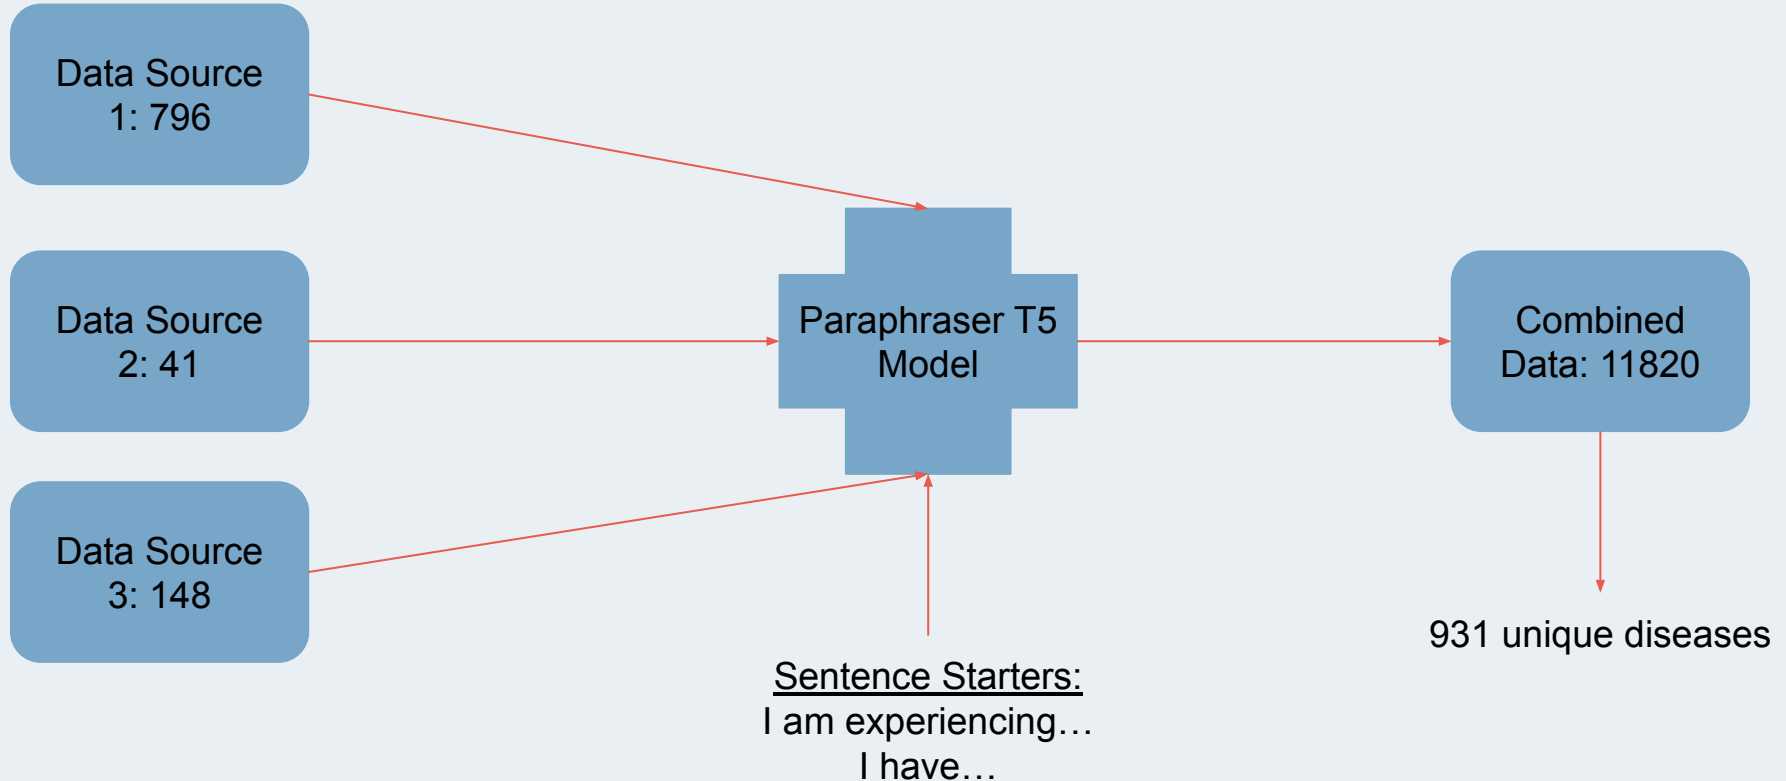

Data Collection

3 Main Datasets:

- [Kaggle](#): Diseases and their Symptoms
- [Kaggle](#): Disease Symptom Prediction
- [Columbia University](#): Disease-Symptom Knowledge Database

Data Paraphrasing Pipeline

Raw Data

Training Overview

Train/Val/Test Split

Used stratified
75-15-10 split

Final Model Training

Trained best model
for 5 more epochs

Inference (Demo)

Applied model to
pipeline

Prelim Model Training

Trained 5 models for
5 epochs to gauge
performance

Final Model Testing

Evaluated model on
withheld testing data

(LR: 2×10^{-5} , Opt: AdamW, LR Decay:
Linear w/ Rate of 0.01, Batch Size: 16)

Prelim Transformer Models

»» Bio-ClinicalBERT

Trained on notes from EHRs for natural language inference and named entity recognition tasks

»» Monologg/Biobert

Trained on PubMed articles for masked language modeling

»» DMIS-Lab/Biobert

Fine tuning of BioBERT by Data Mining and Information Systems Lab at Korea University

»» Bioinformers-8L

Trained on a biomedical corpus of PubMed and PMC articles for masked language modeling

»» Microsoft/BiomedNLP

Trained PubMed abstracts and PMC articles for many NLP tasks including understanding and reasoning

Results & Analysis

Training Loss Results

Validation Loss Results

Validation Accuracy Results

Analysis of Results

- Microsoft/BiomedNLP and Monlogg/BioBERT are top performers on 5 epochs
- After 5 epochs, however, Microsoft outperformed Monlogg
- Monlogg seems to plateau/converge quicker than Microsoft
- Thus, chosen model is **Microsoft BiomedNLP**

Microsoft-BiomedNLP Loss

Microsoft-BiomedNLP Validation Accuracy

Microsoft-BiomedNLP Testing Results

Test Accuracy

Test Top 3 Accuracy

Test Top 5 Accuracy

Conclusions

Limitations & Future Work

- Scope and availability of training data (931 labels/conditions)
 - Difficult to find adequate symptoms and disease data
 - Need to get creative with collecting/generating more data
- Lack of hyperparameter tuning
 - Use grid search or similar methodology to optimize hyperparameters
- Performance on zero-shot/few-shot classification?
 - Still need to see how well model can perform on out-of-scope data
- Disclaimer: Model should not replace the advice of licensed professionals, especially in severe circumstances
 - Intended to aid individuals with minor illnesses or determine what next steps are needed

CONCLUSIONS

Despite the previously mentioned limitations, the results are promising. With incorporation of more data, our fine-tuned model has the potential to alleviate extra stress (due to mild or non-emergency requests) on the healthcare system by providing accurate diagnosis predictions.
